```java
// Program 2 (Internet Bill Calculation)
import java.util.Scanner;

public class InternetBill {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter total data consumed (in GB): ");
        double gb = sc.nextDouble();
        double bill;

        if (gb < 10) {
            bill = 300;
        } else if (gb <= 30) {
            bill = 300 + 5 * (gb - 10);
        } else {
            bill = 400 + 3 * (gb - 30);
        }

        System.out.println("Data consumed = " + gb + " GB");
        System.out.println("Bill amount = Rs. " + bill);

        sc.close();
    }
}

// Compile: javac InternetBill.java
// Run:     java InternetBill
```
